Esempio di verifica

$$\forall \varepsilon \in \mathbb{R}\ |f(x+\varepsilon) - f(x)| < \mathscr{S}$$

$$A\widehat{B}C = 120° - \int_{x=0}^{\infty} \frac{1}{x^2} + \binom{5}{2} - \sum_{i=1}^{N} \frac{i(i+1)}{2} - \overline{x}$$

$$\mathrm{Nm \cdot s^{-2}\Omega} \overset{1cc}{\Longrightarrow} \overset{1cc}{\Longrightarrow} \quad \frac{\mathrm{m}}{\mathrm{s}^2} \implies \overrightarrow{v} \neq \overrightarrow{v_1} \binom{5+2}{2} = 10 \quad \begin{pmatrix} 1 \\ 3 \\ 6 \end{pmatrix} \implies A\widehat{B}C$$

Consideriamo i triangoli ABC e $A'B'C'$:

$$\left.\begin{array}{l} AB \cong A'B' \\ BC \cong B'C' \\ CA \cong C'A' \end{array}\right\} \overset{3°cc}{\Longrightarrow} ABC \cong A'B'C'$$
